

What does eHorus do?

Solve occasional problems for your acquaintances on their PCs, by remotely connecting **from any computer or device with a web browser**, safely and when necessary.

Total control (files, command lines and desktop) of your own or your clients' remote devices, easily, quickly and securely, **even if they are behind a firewall, as long as you have an Internet connection.**

Connect to your home or office PC from wherever you are, with easy remote access to the desktop and all your files. It's secure and you **don't need to install anything on the PC from which you connect** (a friend's PC or a tablet).
